

Protect your file servers against known malware and poisoned web pages – so your network stays in business

The Internet is today's Wild West. It's a highly complex environment that's rife with opportunities for less-than-ethical individuals and entities ready to take advantage of innocent explorers. Every new web-based technology that appears will be followed almost immediately by bad guys who've figured out how to exploit that technology to their own ends.

Why your business needs an extra layer of protection

These bad guys operate in a completely different way than the teenage graffiti artists who were the mainstay of virus-creation for so many years. Today's cybercriminals are running businesses designed to do damage and steal data; they do this by creating websites that deliver malicious software, are typically active for no more than a day before being replaced by a different site. They may also deliver infections through temporary "poisoning" of legitimate websites.

Fear not. AVG File Server Edition will protect your business against these 'here today, gone tomorrow' threats as well as viruses, spyware, trojans, worms and rootkits. AVG File Server Edition gives you powerful, easy-to-use protection that works efficiently and unobtrusively in the background for end users, with easy deployment and central administration for you or your IT staff.

Unique LinkScanner Protection

AVG's Active Surf-Shield and Search-Shield protect in real time against malicious web pages, zero day exploits and drive-by downloads. Other programs rely on static databases and cannot protect you at the only time that matters – the time a user clicks on a link. When users search using Google, Yahoo, or MSN, if the results include web pages that contain malicious code, AVG simply blocks the page so they can't accidentally infect the network. Other questionable or suspicious sites are flagged with an alert to show the degree of risk on the page.

AVG File Server Edition gives your network real-time protection against the latest web-borne threats:

- Solid, reliable protection for today's stealthy threats
 - Real-time safe searching and surfing ensure safe web use
 - Download files from the web and exchange files via instant messaging without the risk of malware infection
 - Streamlined malware detection quickly and efficiently prevents infection from spyware, viruses and worms
 - Advanced anti-rootkit technology defuses even the most complex techno smart bombs
 - Protection for your file servers
 - Remote administration for centralized deployment and management
 - Automatic update service for continuous protection
 - Fast, effective performance without impacting network speed
- Works in the background – doesn't get in the way of employee productivity
- Fast-response customer support and service around the world and around the clock

Tough on Threats. Easy on You.

AVG's management features, AVG Admin and AVG Admin Lite, ensure you can easily and efficiently protect your business against cyberthreats without disruption or system slowdown.

Tough on Threats

- Blocks poisoned web pages in real time – no delays or missed infections
- Detects and removes malware – no infection-induced downtime
- Protects against exploits and drive-by downloads that invisibly and automatically download dangerous content – surf the web with confidence
- Prevents suspicious files from being opened – no more accidental infections
- Automatically quarantines or removes infections – infections can't spread across the network

Easy on You

- Centralized installation and configuration with full statistical reporting
- Supports terminal servers directly
- Flags suspect search results pages
- Free support, program upgrades and signature updates for the full license duration
- Auto-scheduled scanning and updating
