

Because Prevention is Better Than Cure

The Internet is today's Wild West. It's a highly complex environment that's rife with opportunities for less-than-ethical individuals and entities ready to take advantage of innocent explorers. Every new web-based technology that appears will be followed almost immediately by bad guys who've figured out how to exploit that technology to their own ends.

Why you need an extra layer of protection

These bad guys operate in a completely different way than the teenage graffiti artists who were the mainstay of virus-creation for so many years. Today's cybercriminals are running businesses designed to do damage and steal data; they do this by creating websites that deliver malicious software, are typically active for no more than a day before being replaced by a different site.

At the same time as these transient threats are proliferating across the web, the bad guys have exponentially increased their output of traditional viruses. Tens of thousands of new virus samples arrive in security labs every day, and traditional anti-virus alone simply can't keep up, leaving you vulnerable to identity theft and other risks to your personal information.

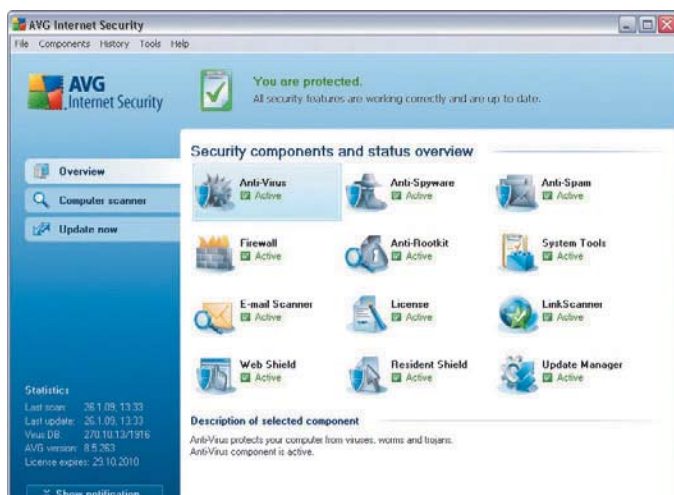

Fear not. AVG Internet Security will protect you against these 'here today, gone tomorrow' threats, as well as against known and unknown viruses, spyware, trojans, worms, hackers, and rootkits. With AVG Internet Security, you can go online to work and play, bank and shop, download and chat with confidence and without fear.

AVG Safe Surf and Search

AVG's unique Active Surf-Shield and Search-Shield technologies protect you in real time against malicious web pages and other stealthy cyberthreats at the only time that matters – the time you click on a link.

AVG Identity Protection

Traditional security products rely on "signatures" to protect your digital valuables from viruses and spyware. AVG Identity Protection goes a step further by using advanced behavioral technology to detect and block new and unknown threats before they can do damage.

AVG Internet Security gives you complete, real-time protection against the latest web-borne threats:

- Comprehensive protection for today's stealthy threats:
 - Real-time safe searching and surfing for a trouble-free online experience
 - Advanced protection against new and unknown viruses
 - Download files from the web and exchange files via instant messaging without the risk of malware infection
 - Streamlined malware detection quickly and efficiently prevents infection from known spyware, viruses and worms
 - Self-learning, personalized anti-spam keeps inboxes free of junk and phishing attacks
 - Smart firewall quietly and efficiently keeps hackers at bay
 - Advanced anti-rootkit technology defuses even the most complex techno smart bombs
- Automatic update service for continuous protection
- Fast, effective performance without slowing systems down
- All-in-one, easy to use protection – install and forget
- Works in the background – doesn't get in the way
- Fast-response customer support and service around the world and around the clock

Tough on Threats. Easy on You.

AVG Internet Security delivers the most advanced and comprehensive protection against today's threats without slowing you down or getting in your way.

Tough on Threats

- Identity protection whenever you go online
- Blocks poisoned web pages in real time
- Detects and removes known and unknown viruses, spyware, rootkits, worms and Trojans
- Protects against invisible attacks by the bad guys while you are surfing the Internet
- Stops spam without blocking the mail you want
- Prevents suspicious files from being opened

Easy on You

- Fast, automatic installation
- Simple set-up and automatic updates
- Works in the background
- Flags suspicious files and web pages
- Free support and updates
